If an FCC declaration of conformity marking is present on the board, the following statement applies:

## FCC Declaration of Conformity

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

For questions related to the EMC performance of this product, contact:

Intel Corporation  
5200 N.E. Elam Young Parkway  
Hillsboro, OR 97124  
1-800-628-8686

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment to an outlet on a circuit other than the one to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

## Canadian Department of Communications Compliance Statement

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

Le présent appareil numérique n'émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de la classe B prescrites dans le Règlement sur le brouillage radioélectrique édicté par le ministère des Communications du Canada.

# Preface

---

This Product Guide gives information about board layout, component installation, BIOS Setup menus, and regulatory requirements for Intel® Desktop Board D865PERL.

## Intended Audience

The Product Guide is intended for technically qualified personnel. It is not intended for general audiences.

## Information Layout

The chapters in this Product Guide are arranged as follows:

- [1 Desktop Board Features](#): a summary of product features.
- [2 Installing and Replacing Desktop Board Components](#): instructions on how to install the desktop board and other hardware components.
- [3 Updating the BIOS](#): instructions on how to update the BIOS.
- [4 Using the BIOS Setup Program](#): contents of the BIOS Setup menus and submenus.
- [5 Technical Reference](#): information about connectors and desktop board resources.
- [A Error Messages and Indicators](#): information about BIOS error messages and beep codes.
- [B Regulatory Compliance](#): safety and EMC regulations, product certification.

## Conventions

The following conventions are used in this manual:

### **WARNING**

*Warnings indicate conditions that, if not observed, can cause personal injury.*

### **CAUTION**

*Cautions warn the user about how to prevent damage to hardware or loss of data.*

### **NOTE**

*Notes call attention to important information.*

## Terminology

The table below gives descriptions to some common terms used in the product guide.

<b>Term</b>	<b>Description</b>
GB	Gigabyte (1,073,741,824 bytes)
GHz	Gigahertz (one billion hertz)
KB	Kilobyte (1024 bytes)
MB	Megabyte (1,048,576 bytes)
Mbit	Megabit (1,048,576 bits)
MHz	Megahertz (one million hertz)

## Box Contents

- Intel Desktop Board
- I/O shield
- One IDE cable
- Two SATA cables (second cable optional)
- One diskette drive cable
- One rear panel USB 2.0 adapter (optional)
- Quick Reference Guide
- Configuration and battery caution statement label
- Intel® Express Installer CD-ROM
- Floppy disk with RAID driver (optional)

# 1 Desktop Board Features

This chapter briefly describes the main features of Intel® Desktop Board D865PERL.

## NOTE

*The board for Desktop Board D865PERL may be either green or black depending on the options that are included on the board.*

Table 1 summarizes the major features of the desktop board.

**Table 1. Feature Summary**

<b>Processor</b>	Support for: <ul style="list-style-type: none"><li>• Intel® Pentium® 4 processor in the mPGA478 package</li><li>• Intel® Celeron® processor the mPGA478 package</li></ul>
<b>Main Memory</b>	<ul style="list-style-type: none"><li>• Four 184-pin, 2.5 V SDRAM Dual Inline Memory Module (DIMM) sockets</li><li>• 400/333/266 MHz single or dual channel DDR SDRAM interface</li><li>• Designed to support up to 4 GB of system memory</li></ul> <p><b>NOTE:</b> System resources (such as PCI and AGP) require physical memory address locations that reduce available memory addresses above 3 GB. This may result in less than 4 GB of memory being available to the operating system and applications. For the latest list of tested memory, refer to the Intel World Wide Web site at: <a href="http://support.intel.com/support/motherboards/desktop/">http://support.intel.com/support/motherboards/desktop/</a></p>
<b>Chipset</b>	<ul style="list-style-type: none"><li>• Intel® 865PE chipset consisting of:</li><li>• Intel® 82865PE Memory Controller Hub (MCH) with Accelerated Hub Architecture (AHA) bus</li><li>• Intel® 82801ER I/O Controller Hub (ICH5R) supporting Intel® RAID Technology or Intel® 82801EB I/O Controller Hub (ICH5)</li><li>• Firmware Hub (FWH)</li></ul>
<b>Audio</b>	<ul style="list-style-type: none"><li>• Intel 865PE chipset (AC '97)</li><li>• Analog Devices Inc. codec</li></ul>
<b>Expansion Capabilities</b>	<ul style="list-style-type: none"><li>• Up to five PCI bus add-in card connectors (SMBus routed to PCI bus 2)</li><li>• One AGP 8x, 4x, 1x connector</li></ul>

## Manufacturing Options

Table 2 shows the manufacturing options for Desktop Board D865PERL.

**Table 2. Manufacturing Options**

Option	Description
LAN	<ul style="list-style-type: none"> <li>• Intel® 82562EZ 10/100 Mbit/sec Platform LAN Connect (PLC) device with RJ-45 connector</li> <li>• Intel® 82547EI 10/100/1000 Mbit/sec Gigabit Ethernet controller with RJ-45 connector</li> </ul>
Audio	<ul style="list-style-type: none"> <li>• Flexible 6-Channel Audio with Jack Sensing, SoundMAX 4 XL featuring Enumeration and Sensing Process (ESP)</li> <li>• 6-channel digital audio</li> </ul>
IEEE-1394a	Three IEEE-1394a ports <ul style="list-style-type: none"> <li>• One port routed to the back panel</li> <li>• Two ports routed to two 1394a headers</li> </ul>
Rear panel USB 2.0 adapter	Allows USB 2.0 connection from the back panel.

## Supported Operating Systems

The desktop board supports the following operating systems:

- Microsoft Windows\* 98 SE
- Microsoft Windows Me
- Microsoft Windows 2000
- Microsoft Windows XP

## Desktop Board Components

Figure 1 shows the approximate location of the major components on Desktop Board D865PERL.

**Figure 1. Desktop Board D865PERL Components**

The following back panel connectors are optional:

- IEEE 1394a
- Coaxial S/PDIF (RCA) Line Out
- Audio Center LFE
- Optical S/PDIF (Toslink) Line Out
- Audio Rear Left/Right Out
- RJ45

## Processor

### CAUTION

*Failure to use an ATX12V power supply, or not connecting the 12 V processor core voltage power supply connector to Desktop Board D865PERL may result in damage to the desktop board and/or power supply.*

Desktop Board D865PERL supports a single Intel Pentium 4 processor or Intel Celeron processor. Processors are not included with the desktop board and must be purchased separately.

The processor connects to the Intel desktop board through the mPGA478-pin socket. The processor may be removed and replaced to accommodate supported higher speed processors.

Desktop Board D865PERL supports the processors listed in Table 4.

**Table 4. Supported Processors**

Type	Designation (GHz)	FSB Frequency (MHz)	L2 Cache (KB)
Intel® Pentium® 4 processor featuring Hyper-Threading Technology	3, 2.80C, 2.60C, and 2.40C	800	512
	3.06	533	512
Intel Pentium 4 processor based on .13 micron process	2.8, 2.66, 2.53, 2.4B, and 2.26	533	512
	2.6, 2.5, 2.40, 2.20, 2A, 1.80A, and 1.60A	400	512
Intel® Celeron® processor based on .13 micron process	2.2, 2.1, and 2.0	400	128

Desktop Board D865PERL requires an ATX12V compliant power supply to function according to desktop board specifications. The board has two ATX12V compliant power supply connectors that are needed to provide extra power to the Intel 865PE chipset and the Intel processor.

## Main Memory

### NOTE

To be fully compliant with all applicable Intel® SDRAM memory specifications, the board should be populated with DIMMs that support the Serial Presence Detect (SPD) data structure. If your memory modules do not support SPD, you will see a notification to this effect on the screen at power up. The BIOS will attempt to configure the memory controller for normal operation.

The desktop board supports dual or single channel memory configurations defined in Table 5.

**Table 5. Memory Configurations**

Memory Speed	Processor	FSB frequency (MHz)	Memory Speed Outcome (MHz)
DDR400	Pentium 4 processor	800	400
DDR333	Pentium 4 processor	800	320
	Pentium 4 processor	533	333
	Pentium 4 processor or Celeron processor	400	266
DDR266	Pentium 4 processor	533 or 400	266
	Celeron processor	400	266

- Up to four 184-pin Double Data Rate (DDR) SDRAM Dual Inline Memory Module (DIMMs) connectors with gold-plated contacts.
- Support for:
  - Unbuffered, non-registered single or double-sided DIMMs
  - Serial Presence Detect (SPD) memory only
  - Non-ECC RAM
  - 2.5 V memory
  - Memory configuration listed below:
    - Up to 1.0 GB utilizing 128 Mb technology
    - Up to 2.0 GB utilizing 256 Mb technology
    - Up to 4.0 GB utilizing 512 Mb technology

### NOTE

System resources (such as PCI and AGP) require physical memory address locations that reduce available memory addresses above 3 GB. This may result in less than 4 GB of memory being available to the operating system and applications.

## Intel® 865PE Chipset

The Intel 865PE chipset consists of the following devices:

- Intel 82865PE Memory Controller Hub (MCH) with AHA bus
- Intel 82801ER I/O Controller Hub (ICH5R) with AHA bus supporting Intel RAID Technology or Intel 82801EB I/O Controller Hub (ICH5) with AHA bus
- Firmware Hub (FWH)

## Audio Subsystem

Desktop Board D865PERL includes one of the following:

- 6-channel audio subsystem based on the Analog Devices AD1985 codec
- Flexible 6-channel audio subsystem based on the Analog Devices AD1985 codec

Both audio subsystems feature:

- Advanced jack sense with Auto Topology Switching that enables the audio codec to recognize what device is connected to an audio port and alerts the user if the wrong type of device has been connected
- Split digital/analog architecture for improved S/N (signal-to-noise) ratio: > 94 dB
- Power management support for ACPI 2.0 (driver dependent)

### 6-Channel Audio Subsystem (Optional)

The audio subsystem includes the following:

- Intel 82801ER I/O Controller Hub (ICH5R)
- Analog Devices AD1985 audio codec
- Microphone input that supports either of the following:
  - A single dynamic, condenser, or electret microphone
  - Dual microphones for use with voice recognition software

The subsystem includes the following connectors.

- Front panel analog audio connector that can be used as a connector for routing the following signals to the front panel or used as a jumper block for routing the signals to the back panel. The connector/jumper block includes pins for:
  - Front left and right out
  - Mic in
- Back panel analog audio connectors:
  - Front left and right out
  - Center / Low Frequency Effects (LFE) out
  - Rear left and right out
  - Line in
  - Mic in

Refer to Figure 15 for the location of the

- back panel coaxial S/PDIF (RCA) connector
- back panel optical S/PDIF (Toslink) connector

## Flexible 6-Channel Audio with Jack Sensing (Optional)

The Flex 6 audio subsystem includes the following:

- Intel 82801EB I/O Controller Hub (ICH5)
- Analog Devices AD1985 audio codec
- Microphone input that supports a single dynamic, condenser, or electret microphone

The subsystem has the following connectors:

- ATAPI-style CD-ROM connector
- Front panel audio connector, including pins for:
  - Line out
  - Mic in
- Back panel audio connectors that are configurable through the audio devices drivers.
  - Line in or Rear left/right out
  - Line out or Front left/right out or S/PDIF line out (see Note)
  - Mic in or Center LFE out

## NOTE

*A 1/8-inch stereo phone plug to the RCA jack adapter/splitter is required to access the S/PDIF signal.*

## Input/Output (I/O) Controller

The super I/O controller features the following:

- Low pin count (LPC) interface
- One serial port
- One parallel port with Extended Capabilities Port (ECP) and Enhanced Parallel Port (EPP) support
- Serial IRQ interface compatible with serialized IRQ support for PCI systems
- PS/2-style mouse and keyboard interfaces
- Interface for one 1.2 MB, 1.44 MB, or 2.88 MB diskette drive
- Intelligent power management, including a programmable wake up event interface
- PCI power management support

## LAN Subsystem (Optional)

The optional LAN (with the Intel 82801ER ICH5R or Intel 82801EB ICH5) provides a Fast PCI LAN subsystem. The LAN subsystem provides the following functions:

- Basic 10/100 Ethernet LAN (Intel 82562EZ) or 10/100/1000 Gigabit Ethernet LAN (Intel 82547EI)
- Support for RJ-45 connector with status indicator LEDs
- Programmable transit threshold
- Configurable EEPROM that contains the MAC address

### LAN Subsystem Software

For LAN software and drivers, refer to the D865PERL link on Intel's World Wide Web site at:

<http://support.intel.com/support/motherboards/desktop>

### RJ-45 LAN Connector LEDs

Two LEDs are built into the RJ-45 LAN connector. Table 6 describes the LED states when the board is powered up and the 10/100 Ethernet LAN subsystem is operating.

**Table 6. RJ-45 10/100 Ethernet LAN Connector LEDs**

LED Color	LED State	Indicates
Green	Off	10 Mbit/sec data rate is selected.
	On	100 Mbit/sec data rate is selected.
Yellow	Off	LAN link is not established.
	On (steady state)	LAN link is established.
	On (brighter and pulsing)	The computer is communicating with another computer on the LAN.

Table 7 describes the LED states when the board is powered up and the 10/100/1000 Gigabit Ethernet LAN subsystem is operating.

**Table 7. RJ-45 10/100/1000 Gigabit Ethernet LAN Connector LEDs**

LED Color	LED State	Indicates
Bi-color LED	Off	10 Mbit/sec data rate is selected.
	Green	100 Mbit/sec data rate is selected.
	Yellow	1 Gbit/sec data rate is selected.
Green	Off	LAN link is not established.
	On (steady state)	LAN link is established.
	On (brighter and pulsing)	The computer is communicating with another computer on the LAN.

## Hi-Speed USB 2.0 Support

### NOTE

*Computer systems that have an unshielded cable attached to a USB port might not meet FCC Class B requirements, even if no device or a low-speed USB device is attached to the cable. Use a shielded cable that meets the requirements for a full-speed USB device.*

The desktop board supports up to eight USB 2.0 ports via ICH5; four ports routed to the back panel and four routed to two internal USB 2.0 headers. USB 2.0 ports are backward compatible with USB 1.1 devices. USB 1.1 devices will function normally at USB 1.1 speeds.

USB 2.0 support requires both an operating system and drivers that fully support USB 2.0 transfer rates. Disabling Hi-Speed USB in BIOS reverts all USB 2.0 ports to USB 1.1 operation. This may be required to accommodate operating systems that do not support USB 2.0.

### NOTE

*USB devices are limited to USB 1.1 transfer rates prior to operating system and driver initialization.*

## Enhanced IDE Interface

The ICH5R and ICH5's IDE interface handles the exchange of information between the processor and peripheral devices like hard disks, CD-ROM drives, and Iomega Zip\* drives inside the computer. The interface supports:

- Up to four IDE devices (such as hard drives)
- ATAPI-style devices (such as CD-ROM drives)
- Older PIO Mode devices
- Ultra DMA-33 and ATA-66/100 protocols
- Laser Servo (LS-120) drives

## Serial ATA

The desktop board supports two Serial ATA channels via ICH5R or ICH5, connecting one device per channel. It supports the optional RAID 0 (Striping) across two SATA disk drives.

## Accelerated Graphics Port (AGP)

### NOTE

*The AGP connector is keyed for 1.5 V and 0.8 V AGP cards only. Do not attempt to install a legacy 3.3 V AGP card. The AGP connector is not mechanically compatible with legacy 3.3 V AGP cards.*

AGP is a high-performance interface for graphics-intensive applications, such as 3D graphics. AGP is independent of the PCI bus and is intended for exclusive use with graphical display devices.

The AGP 3.0 connector supports 8x (0.8 V), 4x, and 1x (1.5 V) add-in cards.

### Related Links:

For information about installing the AGP card, see page 36 in Chapter 2.

## BIOS

The BIOS provides the Power-On Self-Test (POST), the BIOS Setup program, the PCI and IDE auto-configuration utilities, and the video BIOS. The BIOS is stored in the Firmware Hub.

The BIOS can be updated by following the instructions on page 65 in Chapter 3.

### IDE Auto Configuration

If you install an IDE device (such as a hard drive) in your computer, the IDE auto-configuration utility in the BIOS automatically detects and configures the device for your computer. You do not need to run the BIOS Setup program after installing an IDE device. You can override the auto-configuration options by specifying manual configuration in the BIOS Setup program.

To use ATA-66/100 features, the following items are required:

- An ATA-66/100 peripheral device
- An ATA-66/100 compatible cable
- ATA-66/100 operating system device drivers

## PCI Auto Configuration

If you install a PCI add-in card in your computer, the PCI auto-configuration utility in the BIOS automatically detects and configures the resources (IRQs, DMA channels, and I/O space) for that add-in card. You do not need to run the BIOS Setup program after you install a PCI add-in card.

## Security Passwords

The BIOS includes security features that restrict whether the BIOS Setup program can be accessed and who can boot the computer. A supervisor password and a user password can be set for the BIOS Setup and for booting the computer, with the following restrictions:

- The supervisor password gives unrestricted access to view and change all Setup options. If only the supervisor password is set, pressing <Enter> at the password prompt of Setup gives the user restricted access to Setup.
- If both the supervisor and user passwords are set, you must enter either the supervisor password or the user password to access Setup. Setup options are then available for viewing and changing depending on whether the supervisor or user password was entered.
- Setting a user password restricts who can boot the computer. The password prompt is displayed before the computer is booted. If only the supervisor password is set, the computer boots without asking for a password. If both passwords are set, you can enter either password to boot the computer.

## Chassis Intrusion

The board supports a chassis security feature that detects if the chassis cover has been removed. The security feature uses a mechanical switch on the chassis that can be connected to the chassis intrusion header on the desktop board. See Figure 17 on page 56 for the location of the chassis intrusion header.

## Power Management Features

Power management is implemented at several levels, including:

- Advanced Configuration and Power Interface (ACPI)
- Hardware support:
  - Power connectors
  - Fan connectors
  - Suspend to RAM (Instantly Available PC technology)
  - Resume on Ring
  - Wake from USB
  - Wake from PS/2 keyboard/mouse
  - PME# wakeup support

## ACPI

ACPI gives the operating system direct control over the power management and Plug & Play functions of a computer. The use of ACPI with the desktop board requires an operating system that provides full ACPI support.

## Power Connectors

The desktop board has two power connectors. See Figure 17 on page 56 for the location of the power connectors.

## Fan Connectors

The desktop board has two chassis fan headers (Intel Precision Cooling Technology) and one processor fan header. See Figure 17 on page 56 for the location of the fan headers.

## Fan Speed Control (Intel® Precision Cooling Technology)

Intel Precision Cooling Technology automatically adjusts the chassis fan speeds depending on the system's temperature. This feature reduces system fan noise by decreasing the speed of the chassis fans connected to the front and rear chassis fan headers. The processor fan header is not controlled.

The fan speed control feature can be disabled in the BIOS, resulting in the chassis fans always operating at full speed. This feature should be disabled if a self-controlled fan is attached to a chassis fan header.

The overall system noise reduction will vary based on system configuration and environment.

## Suspend to RAM (Instantly Available PC Technology)

### CAUTION

*For Instantly Available PC technology, the 5 V standby line for the power supply must be capable of delivering adequate +5 V standby current. Failure to provide adequate standby current when using this feature can damage the power supply and/or effect ACPI S3 sleep state functionality.*

Instantly Available PC technology enables the board to enter the ACPI S3 (Suspend-to-RAM) sleep state. While in the S3 sleep state, the computer will appear to be off. When signaled by a wake-up device or event, the system quickly returns to its last known awake state.

The desktop board's standby power indicator, shown in Figure 2, is lit when there is standby power to the system. This includes the memory modules and PCI bus connectors, even when the computer appears to be off.

If the system has a dual-colored power LED on the front panel, the sleep state is indicated by the LED turning amber.

OM15473

**Figure 2. Location of Standby Power Indicator****CAUTION**

Power supplies used with this desktop board must be able to provide enough standby current to support the standard Instantly Available (ACPI S3 sleep state) configuration. If the standby current necessary to support multiple wake events from the PCI and/or USB buses exceeds power supply capacity, the desktop board may lose register settings stored in memory.

**Related Links:**

For more information on standby current requirements for the desktop board, refer to the TPS by selecting the Technical Documentation link at:

<http://developer.intel.com/design/motherbd/>

**Resume on Ring**

The operation of Resume on Ring can be summarized as follows:

- Resumes operation from either ACPI S1 or ACPI S3 state
- Requires only one call to access the computer
- Detects incoming call similarly for external and internal modems
- Requires modem interrupt be unmasked for correct operation

**Wake from USB**

USB bus activity wakes the computer from an ACPI S1 or S3 state.

**NOTE**

Wake from USB requires the use of a USB peripheral that supports Wake from USB.

**Wake from PS/2 Keyboard/Mouse**

PS/2 keyboard/mouse activity wakes the computer from an ACPI S1 or S3 state.

## PME# Wakeup Support

When the PME# signal on the PCI bus is asserted, the computer wakes from an ACPI S1, S3, or S5 state.

## Speaker

A speaker is mounted on the desktop board. The speaker provides audible error code (beep code) information during the Power-On Self-Test (POST).

## Battery

A battery on the desktop board keeps the values in CMOS RAM and the clock current when the computer is turned off. See Chapter 2 starting on page 27 for instructions on how to replace the battery.

## Real-Time Clock

The desktop board has a time-of-day clock and 100-year calendar. The battery on the desktop board keeps the clock current when the computer is turned off.

## 2 Installing and Replacing Desktop Board Components

---

This chapter tells you how to:

- Install the I/O shield
- Install and remove the desktop board
- Install and remove a processor and memory
- Install and remove an AGP card
- Connect the IDE and Serial ATA cables
- Configure your system for Intel RAID Technology for Serial ATA
- Connect the front panel header
- Install the front panel audio and USB solutions
- Connect fans and power cables
- Set the BIOS configuration jumper
- Clear passwords
- Replace the battery

### Before You Begin

#### WARNINGS

*The procedures in this chapter assume familiarity with the general terminology associated with personal computers and with the safety practices and regulatory compliance required for using and modifying electronic equipment.*

*Disconnect the computer from its power source and from any telecommunications links, networks, or modems before performing any of the procedures described in this chapter. Failure to disconnect power, telecommunications links, networks, or modems before you open the computer or perform any procedures can result in personal injury or equipment damage. Some circuitry on the board can continue to operate even though the front panel power button is off.*

Follow these guidelines before you begin:

- Always follow the steps in each procedure in the correct order.
- Set up a log to record information about your computer, such as model, serial numbers, installed options, and configuration information.
- Electrostatic discharge (ESD) can damage components. Perform the procedures described in this chapter only at an ESD workstation using an antistatic wrist strap and a conductive foam pad. If such a station is not available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the computer chassis.

## Installation Precautions

When you install and test the Intel desktop board, observe all warnings and cautions in the installation instructions.

To avoid injury, be careful of:

- Sharp pins on connectors
- Sharp pins on printed circuit assemblies
- Rough edges and sharp corners on the chassis
- Hot components (like processors, voltage regulators, and heat sinks)
- Damage to wires that could cause a short circuit

Observe all warnings and cautions that instruct you to refer computer servicing to qualified technical personnel.

## Installation Instructions

### CAUTION

*Follow these guidelines to meet safety and regulatory requirements when installing this board.*

Read and adhere to all of these instructions and the instructions supplied with the chassis and associated modules. If the instructions for the chassis are inconsistent with these instructions or the instructions for associated modules, contact the supplier's technical support to find out how you can ensure that your computer meets safety and regulatory requirements. If you do not follow these instructions and the instructions provided by chassis and module suppliers, you increase safety risk and the possibility of noncompliance with regional laws and regulations.

### Ensure Electromagnetic Compatibility (EMC) Compliance

Before computer integration, make sure that the power supply and other modules or peripherals, as applicable, have passed Class B EMC testing and are marked accordingly.

Pay close attention to the following when reading the installation instructions for the host chassis, power supply, and other modules:

- Product certifications or lack of certifications
- External I/O cable shielding and filtering
- Mounting, grounding, and bonding requirements
- Keying connectors when mating the wrong connectors could be hazardous

If the power supply and other modules or peripherals, as applicable, are not Class B EMC compliant before integration, then EMC testing is required on a representative sample of the newly completed computer.

## Chassis and Component Certifications

Ensure that the chassis and certain components; such as the power supply, peripheral drives, wiring, and cables; are components certified for the country or market where used. Agency certification marks on the product are proof of certification. Typical product certifications include:

- **In Europe**

The CE marking signifies compliance with all applicable European requirements. If the chassis and other components are not properly CE marked, a supplier's Declaration of Conformity statement to the European EMC directive and Low Voltage directive (as applicable), should be obtained. Additionally, other directives, such as the Radio and Telecommunications Terminal Equipment (R&TTE) directive may also apply depending on product features.

- **In the United States**

A certification mark by a Nationally Recognized Testing Laboratory (NRTL) such as UL, CSA, or ETL signifies compliance with safety requirements. Wiring and cables must also be UL listed or recognized and suitable for the intended use. The FCC Class B logo for home or office use signifies compliance with electromagnetic interference (EMI) requirements.

- **In Canada**

A nationally recognized certification mark such as CSA or cUL signifies compliance with safety requirements. The Industry Canada statement at the front of this product guide demonstrates compliance with Canadian EMC regulations. Industry Canada recognizes and accepts FCC certification as denoting compliance with national electromagnetic interference (emissions) requirements.

## Prevent Power Supply Overload

Do not overload the power supply output. To avoid overloading the power supply, make sure that the calculated total current loads of all the modules within the computer is less than the output current rating of each of the power supplies output circuits.

## Place Battery Marking

There is insufficient space on this Desktop Board to provide instructions for replacing and disposing of the Lithium ion coin cell battery. For system safety certification, the following statement or equivalent statement is required to be permanently and legibly marked on the chassis near the battery.

### **CAUTION**

*Risk of explosion if the battery is replaced with an incorrect type. Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.*

### **Related Links:**

For information about replacing the battery, go to page 60 in Chapter 2.

## Use Only for Intended Applications

All Intel desktop boards are evaluated as Information Technology Equipment (I.T.E.) for use in personal computers for installation in homes, offices, schools, computer rooms, and similar locations. The suitability of this product for other applications or environments, such as medical, industrial, alarm systems, test equipment, etc. may require further evaluation.

### Related Links:

For information about regulatory compliance, go to Appendix B on page 107.

## Installing the I/O Shield

The desktop board comes with an I/O shield. When installed in the chassis, the shield blocks radio frequency transmissions, protects internal components from dust and foreign objects, and promotes correct airflow within the chassis.

Install the I/O shield before installing the desktop board in the chassis. Place the shield inside the chassis as shown in Figure 3. Press the shield into place so that it fits tightly and securely. If the shield doesn't fit, obtain a properly-sized shield from the chassis supplier.

OM15693

Figure 3. Installing the I/O Shield

## Installing and Removing the Desktop Board

### WARNING

*Only qualified technical personnel should do this procedure. Disconnect the computer from its power source before performing the procedures described here. Failure to disconnect the power before you open the computer can result in personal injury or equipment damage.*

### NOTE

*Refer to Appendix B for regulatory requirements.*

Refer to your chassis manual for instructions on installing and removing the desktop board.

Figure 4 shows the location of the 11 mounting holes for Desktop Board D865PERL.

OM15475

**Figure 4. Location of Desktop Board Mounting Holes**

## Installing and Removing a Processor

Instructions on how to install the processor to the desktop board are given below.

### Installing a Processor

#### CAUTION

*Before installing or removing the processor, make sure that AC power has been removed by unplugging the power cord from the computer; the standby power LED should not be lit (see Figure 2 on page 25). Failure to do so could damage the processor and the board.*

To install a processor, follow these instructions:

1. Observe the precautions in “Before You Begin” on page 27.
2. Locate the processor socket and raise the socket lever completely.
3. Install the processor so that the corner with the triangle marking (A) is aligned with the corner where the lever is attached to the socket (see Figure 5).
4. Lower the lever to its original position.

OM15476

**Figure 5. Installing a Processor**

### Installing the Processor Fan Heat Sink

Desktop Board D865PERL has an integrated processor fan heat sink retention mechanism (RM). For instructions on how to attach the processor fan heat sink to the integrated processor fan heat sink RM, refer to the boxed processor manual or the Intel World Wide Web site at:

<http://support.intel.com/support/processors/pentium4/intnotes478.htm>

## Connecting the Processor Fan Heat Sink Cable

Connect the processor fan heat sink cable to the processor fan connector (see Figure 6).

OM15475

**Figure 6. Connecting the Processor Fan Heat Sink Cable to the Processor Fan Connector**

## Removing the Processor

For instruction on how to remove the processor fan heat sink and processor, refer to the processor installation manual or the Intel World Wide Web site at:

<http://support.intel.com/support/processors/pentium4/intnotes478.htm>

## Installing and Removing Memory

### CAUTION

To be fully compliant with all applicable Intel SDRAM memory specifications, the boards require DIMMs that support the Serial Presence Detect (SPD) data structure. You can access the PC Serial Presence Detect Specification at:

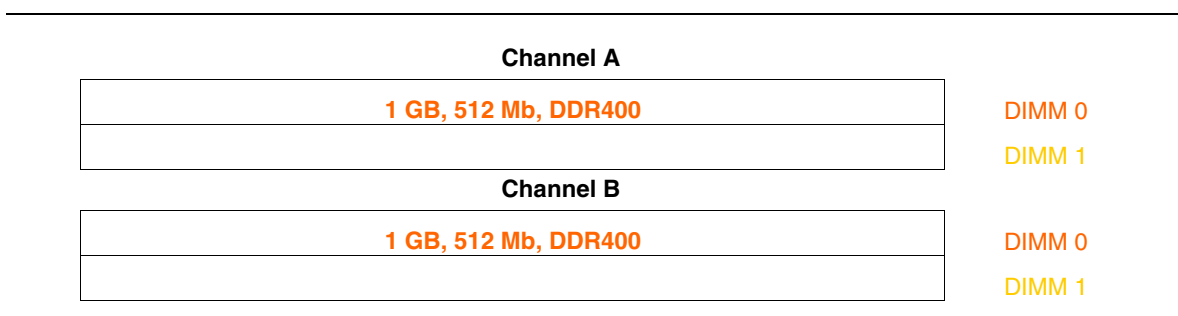

<http://www.intel.com/technology/memory/pcsdram/spec/>

Desktop Board D865PERL has four 184-pin DIMM sockets arranged as DIMM 0 and DIMM 1 in both Channel A and Channel B, as shown in Figure 9 (color was added to DIMM sockets to show how to place DIMMs for dual configuration).

### Dual Channel Configuration

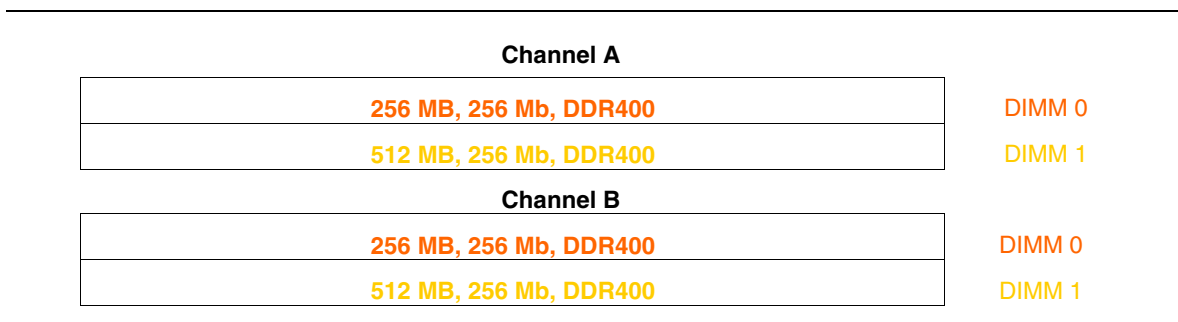

Before installing DIMMs, read and follow these guidelines for dual channel configuration.

Install a matched pair of DIMMs equal in speed, size, and technology (see Figure 7) in DIMM 0 in both channels A and B.

**Figure 7. Dual Configuration Example 1**

If additional memory is to be used, install another matched pair of DIMMs in DIMM 1 in both channels A and B (see Figure 8).

**Figure 8. Dual Configuration Example 2**

**NOTE**

*All other memory configurations will result in single channel memory operation.*

**Installing DIMMs****CAUTION**

*Install memory in the DIMM sockets prior to installing the AGP video card to avoid interference with the memory retention mechanism.*

To install DIMMs, follow these steps:

1. Observe the precautions in “Before You Begin” on page 27.
2. Turn off all peripheral devices connected to the computer. Turn off the computer and disconnect the AC power cord.
3. Remove the computer’s cover and locate the DIMM sockets (see Figure 9).
4. Remove the AGP video card if it interferes with the DIMM retaining clips from being easily opened and closed.

OM15478

**Figure 9. Installing a Memory Module**

5. Make sure the clips at either end of the DIMM socket(s) are pushed outward to the open position.
6. Holding the DIMM by the edges, remove it from its anti-static package.
7. Position the DIMM above the socket. Align the small notch at the bottom edge of the DIMM with the keys in the socket (see inset in Figure 9).
8. Insert the bottom edge of the DIMM into the socket.

9. When the DIMM is inserted, push down on the top edge of the DIMM until the retaining clips snap into place. Make sure the clips are firmly in place.
10. Reinstall the AGP card if it was removed prior to installing the DIMMs.
11. Replace the computer's cover and reconnect the AC power cord.

## Removing DIMMs

To remove a memory module, follow these steps:

1. Observe the precautions in "Before You Begin" on page 27.
2. Turn off all peripheral devices connected to the computer. Turn off the computer.
3. Remove the AC power cord from the computer.
4. Remove the computer's cover.
5. Remove the AGP card if it interferes with the DIMM clips from being easily opened and closed.
6. Gently spread the retaining clips at each end of the DIMM socket. The DIMM pops out of the socket.
7. Hold the DIMM by the edges, lift it away from the socket, and store it in an anti-static package.
8. Reinstall the AGP card if you removed it before taking out the DIMMs.
9. Reinstall and reconnect any parts you removed or disconnected to reach the DIMM sockets.
10. Replace the computer's cover and reconnect the AC power cord.

## Installing and Removing an AGP Card

### CAUTION

*When installing any AGP card on the desktop board, ensure that it is fully seated in the AGP connector before you power on the system. If the card is not fully seated in the AGP connector, an electrical short may result across the AGP connector pins. Depending on the over-current protection of the power supply, certain board components and/or traces may be damaged.*

### NOTE

*The AGP connector is keyed for 1.5 V and 0.8 V AGP cards only. Do not attempt to install a legacy 3.3 V AGP card. The AGP connector is not mechanically compatible with legacy 3.3 V AGP cards.*

The AGP connector supports 1.5 V (4x and 1x) and 0.8 V (8x) AGP cards. The desktop board has an integrated AGP card retention mechanism (RM).

## Installing an AGP Card

Follow these instructions to install an AGP card:

1. Observe the precautions in "Before You Begin" on page 27.
2. Place the card in the AGP connector.
3. Press down on the card until it is completely seated in the AGP connector and the card retention notch snaps into place around the RM pin.
4. Secure the card's metal bracket to the chassis back panel with a screw.

## Removing the AGP Card

Follow these instructions to remove the AGP card from the RM:

1. Observe the precautions in "Before You Begin" on page 27.
2. Remove the screw (B) that secures the card's metal bracket (A) to the chassis back panel.
3. Push back on the RM lever, as shown in Figure 10, until the retention pin completely clears the notch in the card.
4. Pull the card straight up (C).

OM15479

Figure 10. Removing the AGP Card

## Connecting the IDE Cable

The IDE cable can connect two drives to the desktop board. The cable supports the ATA-66/100 transfer protocol. Figure 11 shows the correct installation of the cable.

### NOTE

*ATA-66/100 compatible cables are backward compatible with drives using slower IDE transfer protocols. If an ATA-66/100 disk drive and a disk drive using any other IDE transfer protocol are attached to the same cable, the maximum transfer rate between the drives may be reduced to that of the slowest drive.*

### NOTE

*Do not connect an ATA device as a slave on the same IDE cable as an ATAPI master device. For example, do not connect an ATA hard drive as a slave to an ATAPI CD-ROM drive.*

For correct function of the cable:

- Observe the precautions in "Before You Begin" on page 27.
- Attach the cable end with the single connector to the Intel desktop board (Figure 11-A).
- Attach the cable end with the two closely spaced connectors to the drives (Figure 11-B).

OM15482

Figure 11. Connecting the IDE Cable

## Connecting the Serial ATA Cable

The SATA cable (4-conductor) supports the Serial ATA protocol and connects a single drive to the desktop board. Either end of the cable can be connected to the SATA drive or the connector on the board.

For correct cable function:

1. Observe the precaution in “before You Begin” on page 27.
2. Attach either cable end to the connector (Figure 12-A) on the board.
3. Attach the other cable end to the drive (Figure 12-B).

OM15481

# Configuring the System for Intel® RAID Technology for Serial ATA

## NOTE

*Intel RAID Technology for Serial ATA is supported with Microsoft Windows XP only.*

## Configuring the BIOS for Intel RAID Technology for Serial ATA

The SoftRAID option must be enabled in the BIOS before the system can load the option ROM code for Intel RAID.

1. Enter the BIOS Setup program by pressing the <F2> key after the Power-On-Self-Test (POST) memory test begins.
2. Select the Advanced menu and then the Drive Configuration menu.
3. Switch the Drive Mode option from Legacy to Enhanced. Next, switch the SoftRAID option to Enabled.
4. Press <F10> to save the BIOS settings and exit the BIOS Setup program.

## Creating, Deleting, and Resetting RAID Sets

The Serial ATA RAID set must be configured in the RAID Configuration utility. During POST, the following message will appear for a few seconds:

```
Press <Cntrl-I> to enter Raid Configuration utility
```

After the above message appears, press the <Ctrl> and <I> keys simultaneously.

### Create RAID 0 Volume

1. Select option *1 Create RAID Volume* and press the <Enter> key.
2. Select the stripe value for the RAID 0 array by scrolling through the available values by using the <↑> or <↓> keys and pressing the <Enter> key.
3. The available values range from 8 KB to 128 KB in 8 KB increments. The stripe value should be chosen based on the planned drive usage. Some suggested selections are listed below. The default selection is 64 KB.
  - 16 KB – low disk usage
  - 64 KB – typical disk usage
  - 128 KB – performance disk usage
4. Press the <Enter> key again to the *Create Volume* prompt to create the array. Confirm this selection by pressing the <Y> key after the prompt.
5. Scroll to option *4 Exit* and press the <Enter> key to exit the RAID Configuration utility. Confirm the exit by pressing <Y> key.

## Delete RAID Volume

### CAUTION

*All data on the RAID drives will be lost.*

1. Select option 2 *Delete RAID Volume* and press the <Enter> key to delete the RAID set.
2. Press the <Delete> key to delete the RAID volume. Confirm the volume deletion by pressing the <Y> key.

## Reset RAID Data

### CAUTION

*All data on the RAID drives and any internal RAID structures will be lost.*

1. Select option 3 *Reset RAID Data* and press the <Enter> key to delete the RAID set and remove any RAID structures from the drives.
2. Confirm the selection by pressing the <Y> key.

## Loading the Intel® Application Acceleration 3.0 RAID Edition Driver

For Microsoft Windows XP, follow these steps to install the RAID driver:

1. As Windows Setup begins, press <F6> to specify the RAID driver.
2. When queried by the installation screen, press <S> to specify an additional device.
3. Insert the floppy disk labeled Intel® Application Accelerator 3.0 RAID Driver and press <Enter>.
4. Press <Enter> to select the Intel RAID Controller.
5. Press <Enter> to continue Windows Setup.

## Configuring an Intel RAID Ready System

The Intel Application Accelerator – Integrated RAID Edition offers the flexibility to upgrade from a single Serial ATA drive to a two drive RAID 0 configuration when an additional Serial ATA drive is added to the system. However, several important steps must be followed at the time the system is first configured in order to take advantage of RAID when upgrading to a second Serial ATA drive.

1. BIOS must be configured for RAID before installing Windows XP on the single Serial ATA drive. Refer to section “Configuring BIOS for Intel Integrated RAID for Serial ATA” to properly configure the BIOS.
2. Install the Intel Integrated RAID driver during Window Setup. Refer to section “Loading the Intel Application Accelerator 3.0 RAID Driver” to install the driver during Windows Setup.
3. Install the operating system and then the Intel Application Accelerator 3.0 RAID Edition software. The Intel Application Accelerator 3.0 RAID Edition software is included on the Intel Express Installer CD that ships with the desktop board.

## Upgrading to Serial ATA RAID 0 Configuration from a Single Drive Configuration

1. Install the second Serial ATA drive in the system. Refer to section “Connecting the Serial ATA (SATA) Cable” on page 39.
2. Start the system and boot into Windows XP.
3. Launch the Intel Application Accelerator from the Start Menu (Start → All Programs → Intel Application Accelerator → Intel Application Accelerator).
4. From the RAID tab, right-click on “RAID Volume” and select “Create from Existing Disk.”

5. Select the source disk to create the RAID Volume and then press the “Next” button.

- Enter the name of the RAID volume and the stripe size.

The default name for the RAID Volume is RAID\_Volume1. Select the stripe value for the RAID 0 array. The available values range from 8 KB to 128 KB in 8 KB increments. The stripe value should be chosen based on the planned drive usage. Some suggested selections are listed below. The default selection is 64 KB.

- 16 KB – low disk usage
  - 64 KB – typical disk usage
  - 128 KB – performance disk usage
- Press the “Next” button to continue.
  - Confirm creation of the RAID volume by pressing the “Yes” button.

- Reconfirm creation of the RAID volume by pressing the “Yes” button.

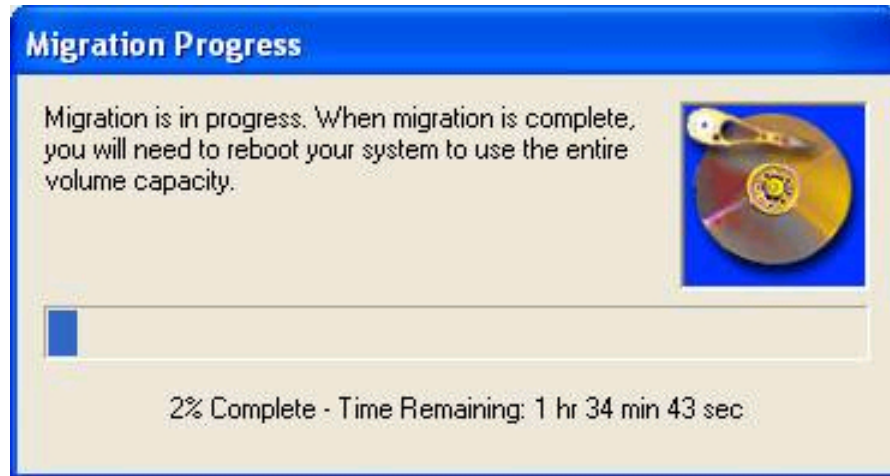

- Press the “Migrate” button to begin the data migration.

**NOTE**

*The migration process may take up to two hours to complete depending on the amount of data that needs to be migrated. A dialog window will appear stating that the migration process may take considerable time to complete and you must click “Yes” in order to start the migration. While you can still continue working on your computer during the migration process, once the migration process starts, it cannot be stopped. If the migration process gets interrupted and your system gets rebooted for any reason, it will pick up the migration process where it left off. You will be provided with an estimated completion time once the migration process starts as illustrated in the following example (the time remaining for your system can differ from the following example):*

11. If the migration process completes successfully, the following dialogue box will appear:

**NOTE**

*If an IDE hard drive is also attached to the system, the RAID volume will need to be moved up in priority in order to boot from it. After the system reboots, press the <F2> key to enter BIOS Setup. Then, navigate to the BOOT menu and select the Hard Disk Drives option. Move the RAID volume to the 1st Drive position. Press <F10> to save the BIOS settings and exit the BIOS Setup program.*

## Creating a RAID Volume Manually

The Intel Application Accelerator RAID Edition offers the ability to create a RAID volume manually. This option should be used if you are using a third bootable device such as an IDE or SCSI hard drive – in addition to using two Serial ATA hard drives. One benefit of using a third bootable device and creating a RAID volume manually is that the operating system is not located on the RAID volume. Should something happen to the RAID volume, the operating system should not be impacted.

### NOTE

*The “Create Volume Manually” option is not selectable unless a third bootable device (such as an IDE or SCSI hard drive) is installed in the system – in addition to using two Serial ATA hard drives.*

To manually create a RAID volume, right-mouse click on “RAID Volumes” and select “Create Manually” to create a new RAID volume as illustrated below:

### NOTE

*Manually creating a RAID volume can also be accomplished by clicking on the “RAID” file menu, and then arrow down and click on “Create Volume Manually.”*

## Select the RAID Volume Name and Strip Size

Select the RAID volume name and strip size and then click “Next”:

### RAID Volume Name:

A desired RAID volume name needs to be typed in where the “RAID\_Volume1” text currently appears above. The RAID volume name has a maximum limit of 16 characters. The RAID volume name must also be English alphanumeric ASCII characters.

### Strip Sizes:

Select the desired strip size setting. As indicated, the optimal setting is 128 KB. Selecting any other option may result in performance degradation. Even though 128 KB is the recommended setting for most users, you should choose the strip size value that is best suited to your specific RAID usage model. The three most typical strip size settings are listed in Table 8.

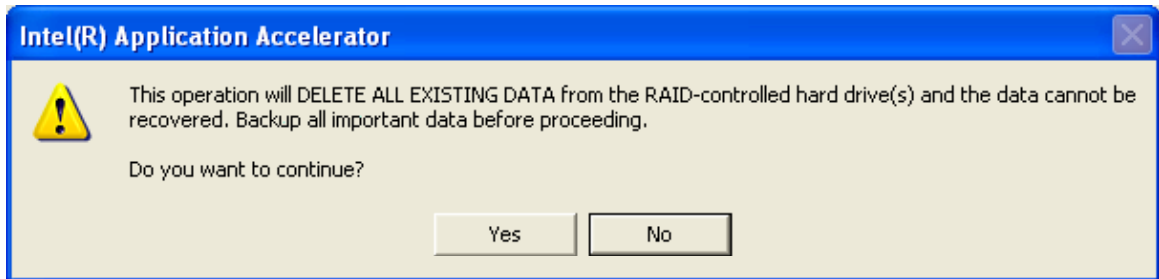

**Table 8. Typical Strip Size Settings**

Strip Size Settings	Descriptions
16 KB	Best for sequential transfers
64 KB	Good general purpose strip size
128 KB	Best performance for most desktops and workstations

**CAUTION**

*Carefully read the next two dialog boxes that appear and decide if you wish to continue. Note that once you select “Yes” on the following two dialog boxes, the Intel Application Accelerator RAID Edition will claim the disks to be used in creating a new volume and this operation cannot be undone. It is critical that you backup important data before selecting “Yes” to these dialog boxes.*

## Confirm Creation of New RAID Volume

Confirm the creation of the new RAID volume and then click “Create”:

## Successful Creation

If the manual volume creation process completes successfully, the following dialog window will appear:

## Connecting Internal Headers

Before connecting cables to the internal headers, observe the precautions in “Before You Begin” on page 27.

OM15489

Item	Description
A	Front panel audio
B	IEEE 1394a (optional)
C	USB 2.0
D	Front panel
E	Power LED

## Installing a Front Panel Audio Solution

Figure 13-A on page 50 shows the location of the front panel audio header. Table 9 shows the pin assignments for the front panel audio header.

**Table 9. Front Panel Audio Header Signal Names (J9A2)**

Pin	Signal Name	Pin	Signal Name
1	AUD-MIC	2	AUD-GND

5	AUD-FPOUT-R	6	AUD-RET-R
7	HP-ON	8	KEY
9	AUD-FPOUT-L	10	AUD-RET-L

To install the cable that connects the front panel audio solution to the front panel audio header, follow these steps:

1. Observe the precautions in “Before You Begin” on page 27.
2. Turn off all peripheral devices connected to the computer. Turn off the computer and disconnect the AC power cord.
3. Remove the cover.
4. Locate the front panel audio header. Remove the two jumpers from the header to disable the back panel audio connectors.
5. Install a correctly keyed and shielded front panel audio cable.
6. Connect the audio cable to the front panel audio solution.
7. Replace the cover.

To restore back panel operations, follow these steps:

1. Observe the precautions in “Before You Begin” on page 27.
2. Turn off all peripheral devices connected to the computer. Turn off the computer and disconnect the AC power cord.
3. Remove the cover.
4. Remove the front panel audio cable.
5. Install a jumper on pins 5-6 (rear R channel).
6. Install a jumper on pins 9-10 (rear L channel).
7. Replace the cover.

## Connecting IEEE 1394a Headers (Optional)

Before connecting the front panel header, observe the precautions in “Before You Begin” on page 27. See Figure 13-B for the location of the headers. Table 10 shows the pin assignments for the optional IEEE 1394a headers.

**Table 10. IEEE 1394a Header Signal Names (J9D1 and J9E1)**

5	TPA2+	6	TPA2-
7	+12 V	8	+12 V
9	Key (no pin)	10	Ground

## Installing a Rear Panel USB 2.0 Adapter (Optional)

Follow these instructions to install a rear panel USB 2.0 adapter:

1. Observe the precautions in “Before You Begin” on page 27.
2. Attach the cable end with the connector to the front panel USB 2.0 header on the desktop board.
3. Secure the cable’s metal bracket to the chassis back panel with a screw.

### Multi-Channel Digital Audio

Two types of S/PDIF connectors are available: coaxial (G) and optical (F). Select the proper connector according to the style of S/PDIF speakers that will be used.

## Setting Up the Flexible 6-Channel Audio with Jack Sensing (Optional)

After installing the SoundMAX 4 XL audio driver from the Intel Express Installer CD-ROM, the multi-channel audio feature can be enabled.

Connect two speakers to the front left/right out (B) and two speakers to the rear left/right out (A) for both 4- and 6-channel audio configurations. For 6-channel audio, connect two additional speakers to the center LFE out (C).

### Multi-Channel Digital Audio

To take advantage of the S/PDIF functionality, a 1/8-inch stereo phone plug to the RCA jack adapter/splitter is required to convert from the stereo input to RCA connection. Connect the stereo input side of the adapter to the S/PDIF (B) connector, and connect the speaker system or S/PDIF decoder to the RCA jack left channel (white, if colored).

## Connecting Hardware Control Cables

See Figure 17 for fan and chassis intrusion header locations. Connect the processor's fan heat sink cable to the processor fan header on the board. Connect chassis fan cables to the board fan headers. Connect the chassis intrusion cable to the respective header on the board.

## Connecting Power Cables

### CAUTION

*Failure to use an ATX12V power supply, or not connecting the 12 V processor core voltage power supply connector to the desktop board may result in damage to the desktop board and/or power supply.*

Figure 17 shows the location of the power connectors.

1. Observe the precautions in “Before You Begin” on page 27.
2. Connect the 12 V processor core voltage power supply cable to the 2x2 connector.
3. Connect the main power supply cable to the 2x10 connector.

## Setting the BIOS Configuration Jumper Block

**CAUTION**

*Always turn off the power and unplug the power cord from the computer before changing the jumper. Moving the jumper with the power on may result in unreliable computer operation.*

The location of the desktop board's BIOS configuration jumper is shown in Figure 18.

OM15483

**Figure 18. Location of the BIOS Configuration Jumper Block**

The three-pin BIOS jumper block enables all board configurations to be done in BIOS Setup. Table 13 shows the jumper settings for the Setup program modes.

**Table 13. Jumper Settings for the BIOS Setup Program Modes (J7H2)**

Jumper Setting	Mode	Description
	Normal (default) (1-2)	The BIOS uses the current configuration and passwords for booting.
	Configure (2-3)	After the Power-On Self-Test (POST) runs, the BIOS displays the Maintenance Menu. Use this menu to clear passwords.
	Recovery (None)	The BIOS recovers data from a recovery diskette in the event of a failed BIOS update.

## Clearing Passwords

This procedure assumes that the board is installed in the computer and the configuration jumper block is set to normal mode.

1. Observe the precautions in “Before You Begin” on page 27.
2. Turn off all peripheral devices connected to the computer. Turn off the computer. Disconnect the computer’s power cord from the AC power source (wall outlet or power adapter).
3. Remove the computer cover.
4. Find the configuration jumper block (see Figure 18).
5. Place the jumper on pins 2-3 as shown below.

6. Replace the cover, plug in the computer, turn on the computer, and allow it to boot.
7. The computer starts the Setup program. Setup displays the Maintenance menu.
8. Use the arrow keys to select Clear Passwords. Press <Enter> and Setup displays a pop-up screen requesting that you confirm clearing the password. Select Yes and press <Enter>. Setup displays the maintenance menu again.
9. Press <F10> to save the current values and exit Setup.
10. Turn off the computer. Disconnect the computer’s power cord from the AC power source.
11. Remove the computer cover.
12. To restore normal operation, place the jumper on pins 1-2 as shown below.

13. Replace the cover, plug in the computer, and turn on the computer.

## Replacing the Battery

A coin-cell battery (CR2032) powers the real-time clock and CMOS memory. When the computer is not plugged into a wall socket, the battery has an estimated life of three years. When the computer is plugged in, the standby current from the power supply extends the life of the battery. The clock is accurate to  $\pm 13$  minutes/year at 25 °C with 3.3 VSB applied.

When the voltage drops below a certain level, the BIOS Setup program settings stored in CMOS RAM (for example, the date and time) might not be accurate. Replace the battery with an equivalent one. Figure 19 on page 63 shows the location of the battery.

### CAUTION

*Risk of explosion if the battery is replaced with an incorrect type. Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.*

### PRÉCAUTION

*Risque d'explosion si la pile usagée est remplacée par une pile de type incorrect. Les piles usagées doivent être recyclées dans la mesure du possible. La mise au rebut des piles usagées doit respecter les réglementations locales en vigueur en matière de protection de l'environnement.*

### FORHOLDSREGEL

*Eksplodingsfare, hvis batteriet erstattes med et batteri af en forkert type. Batterier bør om muligt genbruges. Bortskaffelse af brugte batterier bør foregå i overensstemmelse med gældende miljølovgivning.*

### OBS!

*Det kan oppstå eksplosjonsfare hvis batteriet skiftes ut med feil type. Brukte batterier bør kastes i henhold til gjeldende miljølovgivning.*

### VIKTIGT!

*Risk för explosion om batteriet ersätts med felaktig batterityp. Batterier ska kasseras enligt de lokala miljövårdsbestämmelserna.*

### VARO

*Räjähdyksvaara, jos pariston tyyppi on väärä. Paristot on kierrätettävä, jos se on mahdollista. Käytetyt paristot on hävitettävä paikallisten ympäristömääräysten mukaisesti.*

### VORSICHT

*Bei falschem Einsetzen einer neuen Batterie besteht Explosionsgefahr. Die Batterie darf nur durch denselben oder einen entsprechenden, vom Hersteller empfohlenen Batterietyp ersetzt werden. Entsorgen Sie verbrauchte Batterien den Anweisungen des Herstellers entsprechend.*

**AVVERTIMENTO**

*Esiste il pericolo di un esplosione se la pila non viene sostituita in modo corretto. Utilizzare solo pile uguali o di tipo equivalente a quelle consigliate dal produttore. Per disfarsi delle pile usate, seguire le istruzioni del produttore.*

**PRECAUCIÓN**

*Existe peligro de explosión si la pila no se cambia de forma adecuada. Utilice solamente pilas iguales o del mismo tipo que las recomendadas por el fabricante del equipo. Para deshacerse de las pilas usadas, siga igualmente las instrucciones del fabricante.*

**WAARSCHUWING**

*Er bestaat ontploffingsgevaar als de batterij wordt vervangen door een onjuist type batterij. Batterijen moeten zoveel mogelijk worden gerecycled. Houd u bij het weggooien van gebruikte batterijen aan de plaatselijke milieuwetgeving.*

**ATENÇÃO**

*Haverá risco de explosão se a bateria for substituída por um tipo de bateria incorreto. As baterias devem ser recicladas nos locais apropriados. A eliminação de baterias usadas deve ser feita de acordo com as regulamentações ambientais da região.*

**AŠCIAROŽZNAŚĆ**

*Існуе рызыка выбуху, калі заменены акумулятар непраўльнага тыпу. Акумулятары павінны, па магчымасці, перепрацоўвацца. Пазбаўляцца ад старых акумулятараў патрэбна згодна з мясцовымі заканадаўствам па экалогіі.*

**UPOZORNĚNÍ**

*V případě výměny baterie za nesprávný druh může dojít k výbuchu. Je-li to možné, baterie by měly být recyklovány. Baterie je třeba zlikvidovat v souladu s místními předpisy o životním prostředí.*

**Προσοχή**

*Υπάρχει κίνδυνος για έκρηξη σε περίπτωση που η μπαταρία αντικατασταθεί από μία λανθασμένου τύπου. Οι μπαταρίες θα πρέπει να ανακυκλώνονται όταν κάτι τέτοιο είναι δυνατό. Η απόρριψη των χρησιμοποιημένων μπαταριών πρέπει να γίνεται σύμφωνα με τους κατά τόπο περιβαλλοντικούς κανονισμούς.*

**VIGYÁZAT**

*Ha a telepet nem a megfelelő típusú telepre cseréli, az felrobbanhat. A telepeket lehetőség szerint újra kell hasznosítani. A használt telepeket a helyi környezetvédelmi előírásoknak megfelelően kell kiselejtezni.*

**注意**

異なる種類の電池を使用すると、爆発の危険があります。リサイクルが可能な地域であれば、電池をリサイクルしてください。使用後の電池を破棄する際には、地域の環境規制に従ってください。

### AWAS

*Risiko letupan wujud jika bateri digantikan dengan jenis yang tidak betul. Bateri sepatutnya dikitar semula jika boleh. Pelupusan bateri terpakai mestilah mematuhi peraturan alam sekitar tempatan.*

### OSTRZEŻENIE

*Istnieje niebezpieczeństwo wybuchu w przypadku zastosowania niewłaściwego typu baterii. Zużyte baterie należy w miarę możliwości utylizować zgodnie z odpowiednimi przepisami ochrony środowiska.*

### PRECAUȚIE

*Risc de explozie, dacă bateria este înlocuită cu un tip de baterie necorespunzător. Bateriile trebuie reciclate, dacă este posibil. Depozitarea bateriilor uzate trebuie să respecte reglementările locale privind protecția mediului.*

### ВНИМАНИЕ

*При использовании батареи несоответствующего типа существует риск ее взрыва. Батареи должны быть утилизированы по возможности. Утилизация батарей должна проводиться по правилам, соответствующим местным требованиям.*

### UPOZORNENIE

*Ak batériu vymeníte za nesprávny typ, hrozí nebezpečenstvo jej výbuchu. Batérie by sa mali podľa možnosti vždy recyklovať. Likvidácia použitých batérií sa musí vykonávať v súlade s miestnymi predpismi na ochranu životného prostredia.*

### POZOR

*Zamenjava baterije z baterijo drugačnega tipa lahko povzroči eksplozijo. Če je mogoče, baterije reciklirajte. Rabljene baterije zavržite v skladu z lokalnimi okoljevarstvenimi predpisi.*

### การระวัง

*ระวังการระเบิดที่เกิดจากเปลี่ยนแบตเตอรี่ผิดประเภท หากเป็นไปได้ ควรนำแบตเตอรี่ไปรีไซเคิล การทิ้งแบตเตอรี่ใช้แล้วต้องเป็นไปตามกฎข้อบังคับด้านสิ่งแวดล้อมของท้องถิ่น.*

### UYARI

*Yanlış türde batarya takıldığında patlama riski vardır. Bataryalar mümkün olduğunda geri dönüştürülmelidir. Kullanılmış piller, yerel çevre yasalarına uygun olarak atılmalıdır.*

### ОСТОРОГА

*Використовуйте батареї правильного типу, інакше існують ризик вибуху. Якщо можливо, використані батареї слід утилізувати. Утилізація використаних батарей має бути виконана згідно місцевих норм, що регулюють охорону довкілля.*

To replace the battery, follow these steps:

1. Observe the precautions in “Before You Begin” (see page 27).
2. Turn off all peripheral devices connected to the computer. Disconnect the computer’s power cord from the AC power source (wall outlet or power adapter).
3. Remove the computer cover.
4. Locate the battery on the board (see Figure 19).
5. With a medium flat-bladed screwdriver, gently pry the battery free from its connector. Note the orientation of the “+” and “-” on the battery.
6. Install the new battery in the connector, orienting the “+” and “-” correctly.
7. Replace the computer cover.

## 3 Updating the BIOS

---

This chapter tells you how to update the BIOS by either using the Intel Express BIOS Update utility or the Iflash Memory Update utility, and how to recover the BIOS if an update fails.

### Updating the BIOS with the Intel® Express BIOS Update Utility

With the Intel Express BIOS Update utility you can update the system BIOS while in the Windows environment. The BIOS file is included in an automated update utility that combines the functionality of the Intel® Flash Memory Update Utility and the ease-of use of Windows-based installation wizards.

To update the BIOS with the Intel Express BIOS Update utility:

1. Go to the Intel World Wide Web site:  
<http://support.intel.com/support/motherboards/desktop/>
2. Navigate to the D865PERL page, click “[view] Latest BIOS updates,” and select the Express BIOS Update utility file.
3. Download the file to your hard drive. (You can also save this file to a diskette. This is useful if you are updating the BIOS for multiple identical systems.)
4. Close all other applications. This step is required. Your system will be rebooted at the last Express BIOS Update window.
5. Double-click the executable file from the location on your hard drive where it was saved. This runs the update program.
6. Follow the instructions provided in the dialog boxes to complete the BIOS update.

### Updating the BIOS with the Iflash Memory Update Utility

With the Iflash BIOS update utility you can update the system BIOS from a floppy disk or other bootable media. The utility available from the Web provides a simple method for creating a bootable flash memory update floppy that will automatically update your BIOS.

#### Obtaining the BIOS Update File

You can update to a new version of the BIOS by using the BIOS update file. The BIOS update file is a compressed self-extracting archive that contains all the files you need to update the BIOS. The BIOS update file contains:

- New BIOS files
- BIOS recovery files
- Intel Flash Memory Update Utility

You can obtain the BIOS update file through your computer supplier or by navigating to the Desktop Board D865PERL page on the Intel World Wide Web site at:

<http://support.intel.com/support/motherboards/desktop>

Navigate to the D865PERL page, click “[view] Latest BIOS updates,” and select the Iflash BIOS Update utility file.

## NOTE

*Review the instructions distributed with the update utility before attempting a BIOS update.*

The Iflash Memory Update utility allows you to:

- Update the BIOS in flash memory
- Update the language section of the BIOS

## Updating the BIOS

## CAUTION

*The AUTOEXEC.BAT file provided with the update files updates the BIOS. Do not interrupt the process or the system may not function.*

1. Boot the computer with the BIOS update diskette in drive A. During system boot, the AUTOEXEC.BAT file provided with the update files will automatically run the BIOS update process.
2. When the update process is complete, the monitor will display a message telling you to remove the diskette and to reboot the system.
3. As the computer boots, check the BIOS identifier (version number) to make sure the update was successful. If a logo appears, press <Esc> to view the POST messages.

## Recovering the BIOS

It is unlikely that anything will interrupt the BIOS update; however, if an interruption occurs, the BIOS could be damaged. The following steps explain how to recover the BIOS if an update fails. The following procedure uses recovery mode for the Setup program. See page 58 for more information on Setup modes.

## NOTE

*Because of the small amount of code available in the boot block area, there is no video support. You will not see anything on the screen during this procedure. Monitor the procedure by listening to the speaker and looking at the diskette drive LED.*

1. Turn off the computer, disconnect the computer’s power cord, and disconnect all external peripherals.
2. Remove the computer cover and locate the configuration jumper block (see Figure 18).
3. Remove the jumper from all pins as shown below to set recovery mode for Setup.

4. Insert the bootable BIOS update diskette into diskette drive A.
5. Replace the computer cover, connect the power cord, turn on the computer, and allow it to boot. The recovery process will take a few minutes.
6. Listen to the speaker:
  - Upon applying power, drive A will begin to show activity. In about a minute, two beeps are heard and drive A activity ceases (temporarily) indicating the successful recovery of the BIOS core. Drive A activity will begin again followed by two more beeps indicating the successful recovery of the boot block. This sequence of events indicates a successful BIOS recovery.
  - A series of continuous beeps indicates a failed BIOS recovery.
7. If recovery fails, return to step 1 and repeat the recovery process.
8. If recovery is successful, turn off the computer, and disconnect its power cord.
9. Remove the computer cover and continue with the following steps.
10. On the jumper block, reinstall the jumper back on pins 1-2 as shown below to set normal mode for Setup.

11. Leave the update diskette in drive A, replace the computer cover, and connect the computer's power cord.
12. Turn on the computer and continue with the BIOS update.

# 4 Using the BIOS Setup Program

The BIOS Setup program can be used to view and change the BIOS settings for the computer. The BIOS Setup program is accessed by pressing the <F2> key after the Power-On Self-Test (POST) memory test begins and before the operating system boot begins.

## NOTE

*The BIOS Setup menus described in this section may not show the latest settings. For the latest BIOS settings, refer to the Intel® Desktop Board D865PERL Technical Product Specification or the Intel World Wide Web site:*

<http://support.intel.com/support/motherboards/desktop>

## NOTE

*For reference purposes, you should write down the current Setup settings. When you make changes to the settings, update this record.*

## NOTE

*The Setup menus described in this section apply to the desktop boards with BIOS identifier RL86510A.86A. Boards with other BIOS identifiers might have differences in some of the Setup menu screens.*

Table 14 shows the BIOS Setup program menu bar.

## Peripheral Configuration Submenu

This submenu shown in Table 21 is used for configuring computer peripherals.

**Table 21. Peripheral Configuration Submenu**

Feature	Options	Description
Serial Port A	<ul style="list-style-type: none"> <li>Disabled</li> <li>Enabled</li> <li><b>Auto (default)</b></li> </ul>	Configures serial port A. <i>Auto</i> assigns the first free COM port, normally COM1, the address 3F8h, and the interrupt IRQ4. An * (asterisk) displayed next to an address indicates a conflict with another device.
Base I/O Address (This feature is present only when Serial Port A is set to <i>Enabled</i> )	<ul style="list-style-type: none"> <li><b>3F8 (default)</b></li> <li>2F8</li> <li>3E8</li> <li>2E8</li> </ul>	Specifies the base I/O address for serial port A if serial port A is enabled.
Interrupt (This feature is present only when Serial Port A is set to <i>Enabled</i> )	<ul style="list-style-type: none"> <li>IRQ 3</li> <li><b>IRQ 4 (default)</b></li> </ul>	Specifies the interrupt for serial port A if serial port A is enabled.
Parallel Port	<ul style="list-style-type: none"> <li>Disabled</li> <li>Enabled</li> <li><b>Auto (default)</b></li> </ul>	Configures the parallel port. <i>Auto</i> assigns LPT1 the address 378h and the interrupt IRQ7. An * (asterisk) displayed next to an address indicates a conflict with another device.

## ATA/IDE Configuration Submenu

This submenu shown in Table 22 is used to configure ATA/IDE device options.

**Table 22. ATA/IDE Configuration Submenu**

Feature	Options	Description
ATA/IDE Configuration	<ul style="list-style-type: none"> <li>Disabled</li> <li>Legacy</li> <li><b>Enhanced (default)</b></li> </ul>	Specifies the integrated IDE controller. <i>Disabled</i> disables the integrated IDE controller. <i>Legacy</i> enables up to two IDE channels for OS requiring legacy IDE operation. <i>Enhanced</i> all SATA and PATA resources
Legacy IDE Channels	<ul style="list-style-type: none"> <li>PATA Pri only</li> <li>PATA Sec only</li> <li><b>PATA PRI and Sec (default)</b></li> <li>SATA P0/P1 only</li> <li>SATA P0/P1, PATA Sec</li> <li>SATA P0/P1, PATA Pri</li> </ul>	Configures PATA and SATA resources for OS requiring legacy IDE operation.
PCI IDE Bus Master	<ul style="list-style-type: none"> <li>Disabled</li> <li><b>Enabled (default)</b></li> </ul>	Allows a PCI device to initiate a transaction as a master.
Hard Disk Pre-Delay	<ul style="list-style-type: none"> <li><b>Disabled (default)</b></li> <li>3 Seconds</li> <li>6 Seconds</li> <li>9 Seconds</li> <li>12 Seconds</li> <li>15 Seconds</li> <li>21 Seconds</li> <li>30 Seconds</li> </ul>	Specifies the hard disk drive pre-delay. S.M.A.R.T.	<ul style="list-style-type: none"> <li>• <b>Auto (default)</b></li> <li>• Disable</li> <li>• Enable</li> </ul>	Self-monitoring analysis and reporting technology.
Cable Detected (Note)	None	Displays the type of cable connected to the IDE interface: 40-conductor or 80-conductor (for ATA-66/100 devices) or Serial ATA.

Note: These configuration options appear only if an IDE device is installed.

## Diskette Configuration Submenu

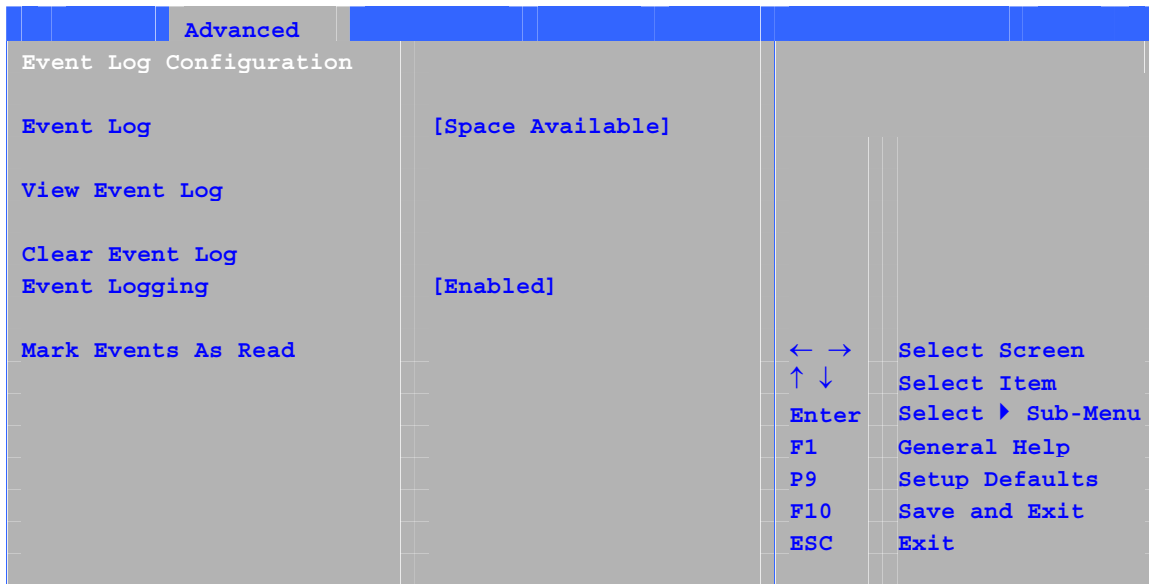

This submenu shown in Table 24 is used to configure the floppy drive.

**Table 24. Diskette Configuration Submenu**

Feature	Options	Description
Diskette Controller	<ul style="list-style-type: none"> <li>Disabled</li> <li><b>Enabled (default)</b></li> </ul>	Configures the integrated floppy controller.
Floppy A	<ul style="list-style-type: none"> <li>Disabled</li> <li>360 KB 5¼"</li> <li>1.2 MB 5¼"</li> <li>720 KB 3½"</li> <li><b>1.44 MB 3½" (default)</b></li> <li>2.88 MB 3½"</li> </ul>	Selects the floppy drive type.
Diskette Write Protect	<ul style="list-style-type: none"> <li><b>Disabled (default)</b></li> <li>Enabled</li> </ul>	Disables or enables diskette drive write protection.

## Event Log Configuration Submenu

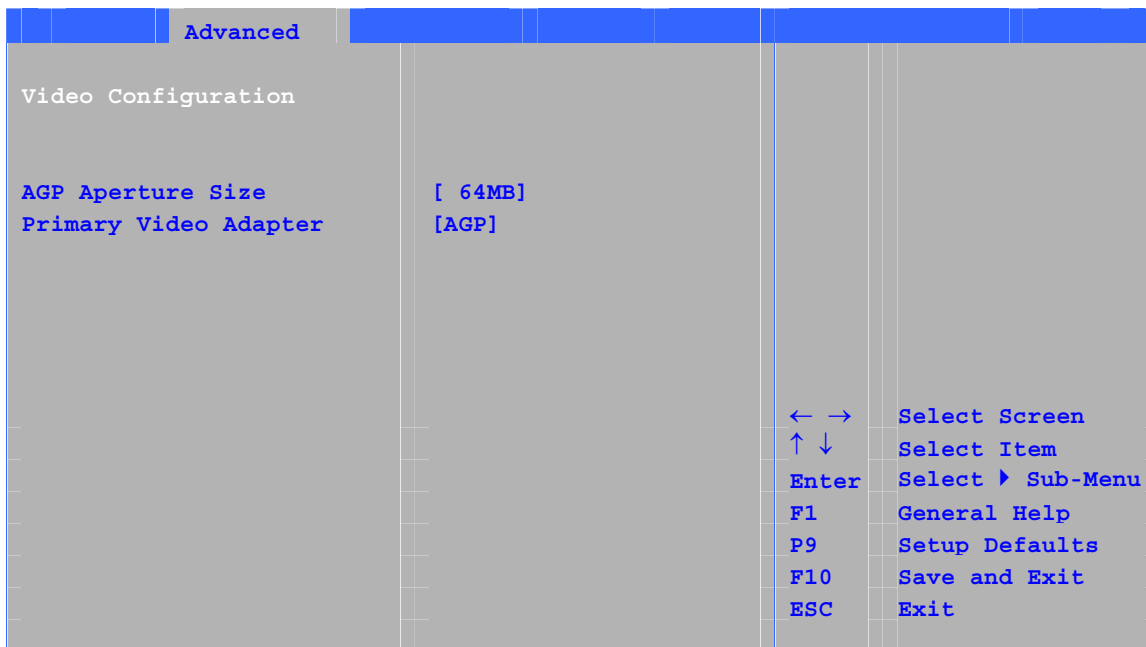

The submenu shown in Table 25 is used to configure the event logging features.

**Table 25. Event Log Configuration Submenu**

Feature	Options	Description
Event Log	No options	Indicates if there is space available in the event log.
View Event Log	[Enter]	Views the contents of the DMI event log.
Clear Event Log	No options	Discards all events in the event log.
Event Logging	<ul style="list-style-type: none"> <li>• Disabled</li> <li>• <b>Enabled (default)</b></li> </ul>	Enables or disables event logging.
Mark Events As Read	[Enter]	Marks all DMI events in the event log as read.

## Video Configuration Submenu

The submenu shown in Table 26 is used to configure video features.

Feature	Options	Description
AGP Aperture Size	<ul style="list-style-type: none"> <li>• 4MB</li> <li>• 8MB</li> <li>• 16MB</li> <li>• 32MB</li> <li>• <b>64MB (default)</b></li> <li>• 128MB</li> <li>• 256MB</li> </ul>	Amount of system memory available for direct access by the graphics device.
Primary Video Adapter	<ul style="list-style-type: none"> <li>• <b>AGP (default)</b></li> <li>• PCI</li> </ul>	Allows selecting an AGP or PCI video controller as the display device that will be active when the system boots.

## USB Configuration Submenu

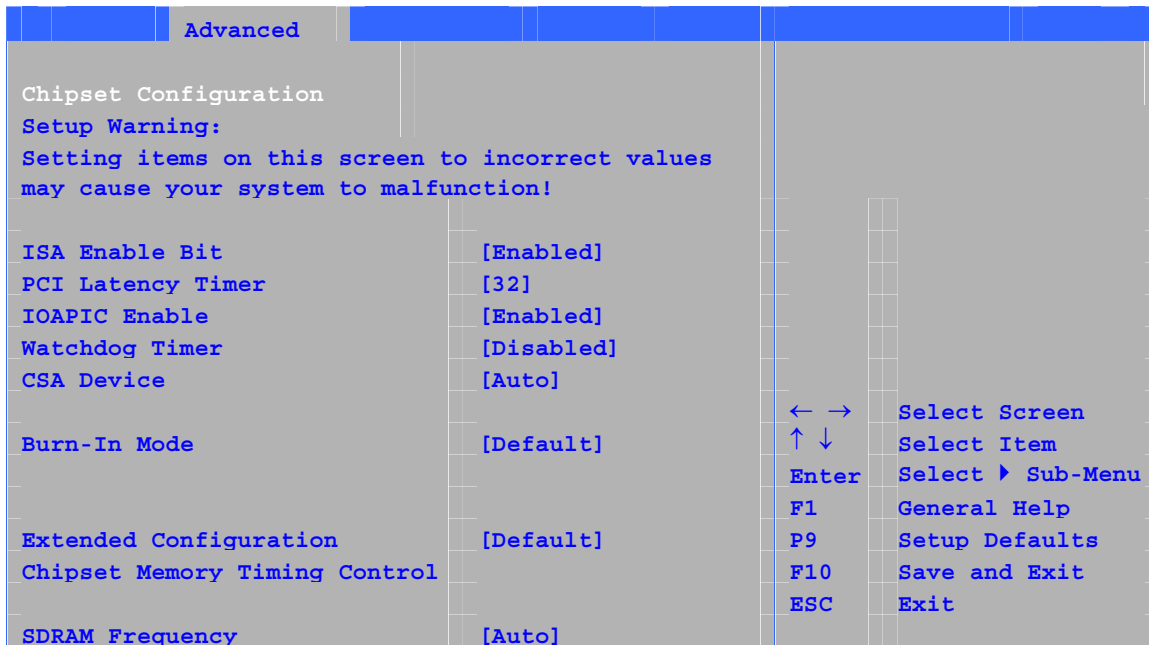

The submenu shown in Table 27 is used to configure USB features.

**Table 27. USB Configuration Submenu**

Feature	Options	Description
High Speed USB	<ul style="list-style-type: none"> <li>• Disabled</li> <li>• <b>Enabled (default)</b></li> </ul>	Disable this option when a USB 2.0 driver is not available.
Legacy USB Support	<ul style="list-style-type: none"> <li>• Disabled</li> <li>• <b>Enabled (default)</b></li> </ul>	Enables support for legacy USB.

## Chipset Configuration Submenu

The submenu shown in Table 28 is used to configure advanced chipset features.

## Fan Control Submenu

The menu shown in Table 29 is used to configure hardware management features.

**Table 29. Hardware Management**

Feature	Options	Description
Fan Control	<ul style="list-style-type: none"> <li>Disabled</li> <li><b>Enabled (default)</b></li> </ul>	Disables or enables system fan control.
Lowest Fan Speed	<ul style="list-style-type: none"> <li><b>Slow (default)</b></li> <li>Off</li> </ul>	<p>This option defines the fan speed at the lowest system temperature.</p> <p><i>Slow</i> allows the fans to continue to run at a reduced speed at low system temperatures.</p> <p><i>Off</i> turns off the fans at low system temperatures.</p>

## Security Menu

The menu shown in Table 31 is used to set passwords and security features.

**Table 31. Security Menu**

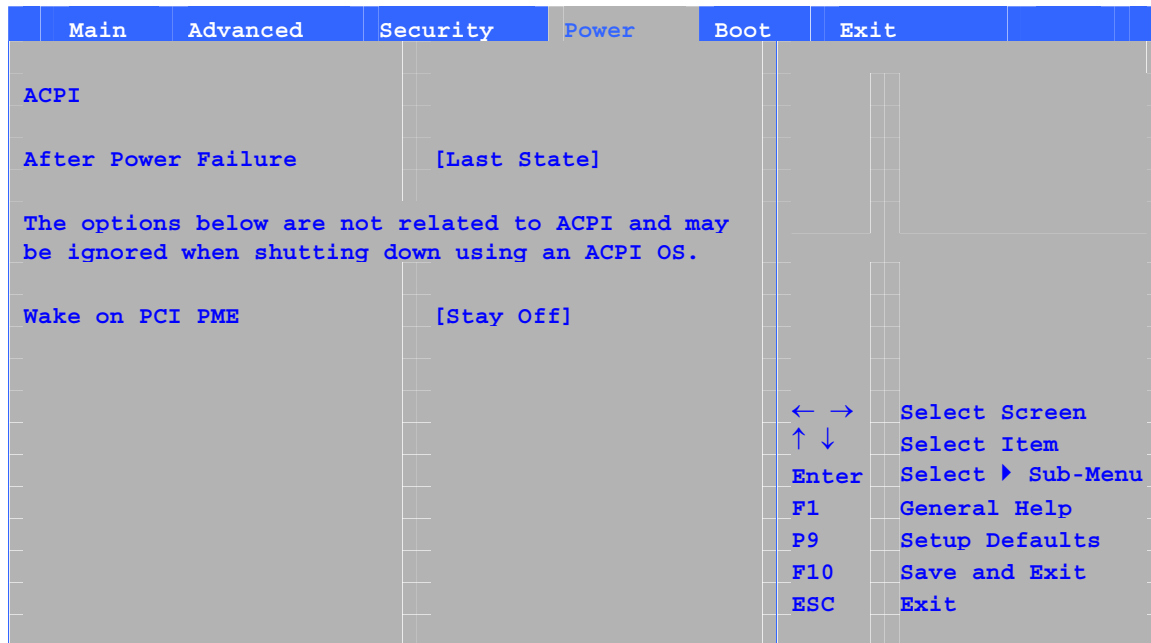

If no password entered previously:		
Feature	Options	Description
Supervisor Password	No options	Reports if there is a supervisor password set.
User Password	No options	Reports if there is a user password set.
Set Supervisor Password	Password can be up to seven alphanumeric characters.	Specifies the supervisor password.
Set User Password	Password can be up to seven alphanumeric characters.	Specifies the user password.
Clear User Password (Note 1)	<ul style="list-style-type: none"> <li>• <b>Yes (default)</b></li> <li>• No</li> </ul>	Clears the user password.

Notes:

1. This feature appears only if a user password has been set.
2. This feature appears only if both a user password and a supervisor password have been set.

## Power Menu

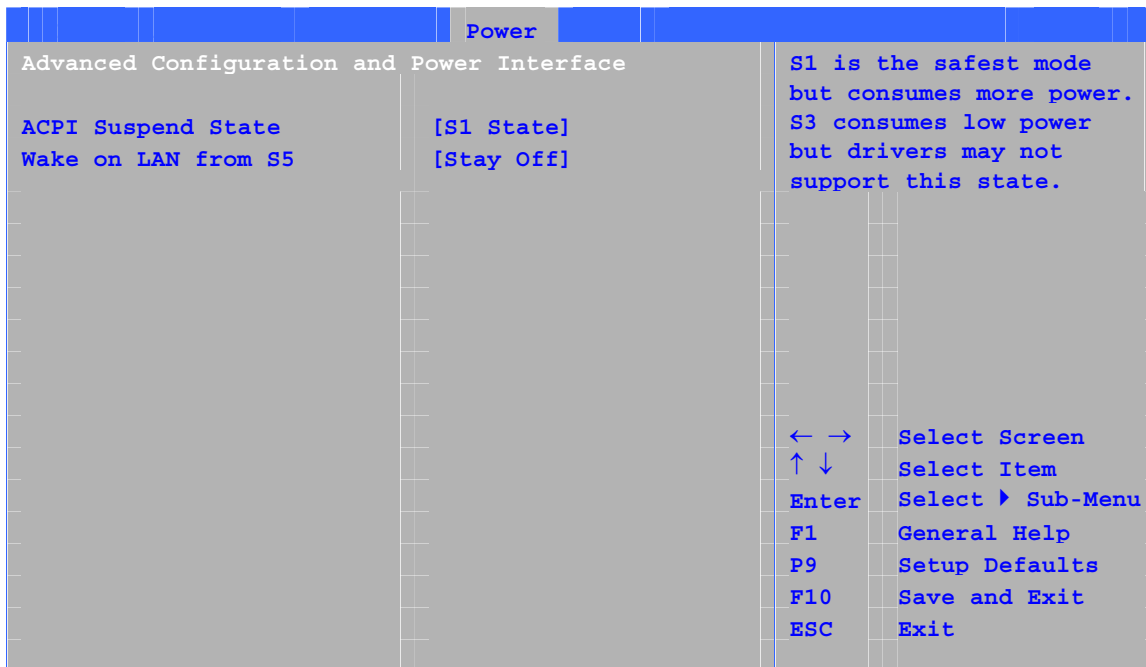

The menu shown in Table 32 is used to set power management features.

**Table 32. Power Menu**

Feature	Options	Description
ACPI	No Options	When selected, displays the ACPI submenu.
After Power Failure	<ul style="list-style-type: none"> <li>Stay Off</li> <li><b>Last State (default)</b></li> <li>Power On</li> </ul>	Determines the mode of operation if a power loss occurs. <i>Stay Off</i> keeps the power off until the power button is pressed. <i>Last State</i> restores the previous power state before power loss occurred. <i>Power On</i> restores power to the computer.
Wake on PCI PME	<ul style="list-style-type: none"> <li><b>Stay Off (default)</b></li> <li>Power-On</li> </ul>	Determines how the system responds to a PCI-PME wake up event.

## ACPI Submenu

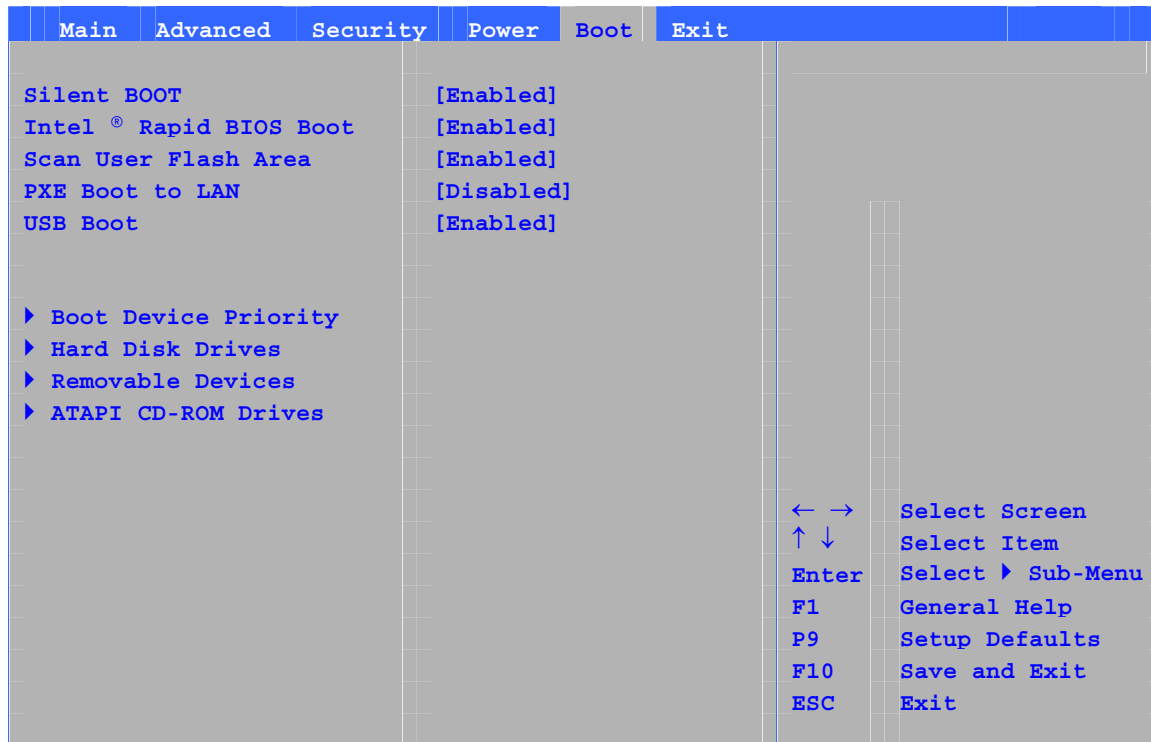

The submenu represented in Table 33 is for setting the ACPI features.

**Table 33. ACPI Submenu**

Feature	Options	Description
ACPI Suspend Mode	<ul style="list-style-type: none"> <li>• <b>S1 State (default)</b></li> <li>• S3 State</li> </ul>	Specifies the ACPI sleep state.
Wake on LAN* from S5	<ul style="list-style-type: none"> <li>• <b>Stay Off (default)</b></li> <li>• Power On</li> </ul>	In ACPI soft-off mode only, determines how the system responds to a LAN wake up event when the system is in the ACPI soft-off mode.

## Boot Menu

The menu shown in Table 34 is used to set the boot features and the boot sequence.

**Table 34. Boot Menu**

Feature	Options	Description
Silent Boot	<ul style="list-style-type: none"> <li>Disabled</li> <li><b>Enabled (default)</b></li> </ul>	<p><i>Disabled</i> displays normal POST messages.</p> <p><i>Enabled</i> displays OEM logo instead of POST messages.</p>

**Table 36. Hard Disk Drives Submenu**

Feature	Options	Description
1 <sup>st</sup> Hard Disk Drive (Note)	Dependent on installed hard drives	Specifies the boot sequence from the available hard disk drives. To specify boot sequence: 1. Select the boot device with <↑> or <↓>. 2. Press <Enter> to set the selection as the intended boot device.

Note: This boot device submenu appears only if at least one boot device of this type is installed. This list will display up to 12 hard disk drives, the maximum number of hard disk drives supported by the BIOS.

## Removable Devices Submenu

The submenu in shown Table 37 is for setting removable devices.

**Table 37. Removable Devices Submenu**

Feature	Options	Description
1 <sup>st</sup> Removable Device (Note)	Dependent on installed removable devices	Specifies the boot sequence from the available removable devices. To specify boot sequence: 1. Select the boot device with <↑> or <↓>. 2. Press <Enter> to set the selection as the intended boot device.

Note: This boot device submenu appears only if at least one boot device of this type is installed. This list will display up to four removable devices, the maximum number of removable devices supported by the BIOS.

## ATAPI CD-ROM Drives

		Boot	
1st Drive	[xxxxxx]		Specifies the boot sequence from the available devices. Select the boot device with UpArrow or DownArrow key. Press Enter to set the selections as the intended boot device. ARMD = ATAPI Removable Media Device.
2nd Drive	[xxxxxx]

Note: This boot device submenu appears only if at least one boot device of this type is installed. This list will display up to four ATAPI CD-ROM drives, the maximum number of ATAPI CD-ROM drives supported by the BIOS.

## Exit Menu

The menu shown in Table 39 is used to exit the BIOS Setup program, saving changes, and loading and saving defaults.

**Table 39. Exit Menu**

Feature	Description
Exit Saving Changes	Exits and saves the changes in CMOS SRAM.
Exit Discarding Changes	Exits without saving any changes made in the BIOS Setup program.
Load Optimal Defaults	Loads optimal defaults.
Load Custom Defaults	Loads the custom defaults for Setup options.
Save Custom Defaults	Saves the current values as custom defaults. Normally, the BIOS reads the Setup values from flash memory. If this memory is corrupted, the BIOS reads the custom defaults. If no custom defaults are set, the BIOS reads the factory defaults.
Discard Changes	Discards changes without exiting Setup. The option values present when the computer was turned on are used.

# 5 Technical Reference

This chapter shows the location of the:

- Back panel connectors
- Audio connectors
- Add-in board and peripheral interface connectors

## **CAUTION**

*Many of the midboard and front panel connectors provide operating voltage (+5 V dc and +12 V dc, for example) to devices inside the computer chassis, such as fans and internal peripherals. These connectors are not overcurrent protected. Do not use these connectors for powering devices external to the computer chassis. A fault in the load presented by the external devices could cause damage to the computer, the interconnecting cable, and the external devices themselves.*

## Back Panel Connectors

### NOTE

The line out connector, located on the back panel, is designed to power either headphones or amplified speakers only. Poor audio quality may occur if passive (non-amplified) speakers are connected to this output.

Figure 20 shows the back panel connectors.

800 K - 896 K	C8000 - DFFFF	96 KB	Available high DOS memory (open to the PCI bus)
640 K - 800 K	A0000 - C7FFF	160 KB	Video memory and BIOS
639 K - 640 K	9FC00 - 9FFFF	1 KB	Extended BIOS data (movable by memory manager software)
512 K - 639 K	80000 - 9FBFF	127 KB	Extended conventional memory
0 K - 512 K	00000 - 7FFFF	512 KB	Conventional memory

## DMA Channels

**Table 41. DMA Channels**

DMA Channel Number	Data Width	System Resource
0	8 or 16 bits	
1	8 or 16 bits	Parallel port
2	8 or 16 bits	Floppy drive
3	8 or 16 bits	Parallel port (for ECP or EPP)
4	8 or 16 bits	DMA controller
5	16 bits	Open
6	16 bits	Open
7	16 bits	Open

## Interrupts

**Table 42. Interrupts**

IRQ	System Resource
NMI	I/O channel check
0	Reserved, interval timer
1	Reserved, keyboard buffer full
2	Reserved, cascade interrupt from slave PIC
3	COM2*
4	COM1*
5	LPT2 (Plug and Play option) / **
6	Floppy drive controller
7	LPT1*
8	Real time clock
9	**
10	**
11	**
12	Onboard mouse port (if present, else user available)
13	Reserved, math coprocessor
14	Primary IDE (if present, else user available)
15	Secondary IDE (if present, else user available)

\* Default, but can be changed to another IRQ.

\*\* Dynamically allocated for all PCI/AGP devices and slots.

# A Error Messages and Indicators

---

Desktop Board D865PERL reports POST errors in two ways:

- By sounding a beep code
- By displaying an error message on the monitor

## BIOS Beep Codes

The BIOS beep codes are listed in Table 43. The BIOS also issues a beep code (one long tone followed by two short tones) during POST if the video configuration fails (a faulty video card or no card installed) or if an external ROM module does not properly checksum to zero.

**Table 43. Beep Codes**

Number of Beeps	Description
1	Refresh failure
2	Parity cannot be reset
3	First 64 K memory failure
4	Timer not operational
5	Processor failure (Reserved; not used)
6	8042 GateA20 cannot be toggled (memory failure or not present)
7	Exception interrupt error
8	Display memory R/W error
9	(Reserved; not used)
10	CMOS Shutdown register test error
11	Invalid BIOS (such as, POST module not found)

## BIOS Error Messages

When a recoverable error occurs during the POST, the BIOS displays an error message describing the problem.

**Table 44. BIOS Error Messages**

Error Message	Explanation
GA20 Error	An error occurred with Gate-A20 when switching to protected mode during the memory test.
Pri Master HDD Error Pri Slave HDD Error Sec Master HDD Error Sec Slave HDD Error	Could not read sector from corresponding drive.
Pri Master Drive - ATAPI Incompatible Pri Slave Drive - ATAPI Incompatible Sec Master Drive - ATAPI Incompatible Sec Slave Drive - ATAPI Incompatible	Corresponding drive is not an ATAPI device. Run Setup to make sure device is selected correctly.
A: Drive Error B: Drive Error	No response from the diskette drive.
CMOS Battery Low	The battery may be losing power. Replace the battery soon.
CMOS Display Type Wrong	The display type is different than what has been stored in CMOS. Check Setup to make sure type is correct.
CMOS Checksum Bad	The CMOS checksum is incorrect. CMOS memory may have been corrupted. Run Setup to reset values.
CMOS Settings Wrong	CMOS values are not the same as the last boot. These values have either been corrupted or the battery has failed.
CMOS Date/Time Not Set	The time and/or date values stored in CMOS are invalid. Run Setup to set correct values.
DMA Error	Error during read/write test of DMA controller.
FDC Failure	Error occurred trying to access diskette drive controller.
HDC Failure	Error occurred trying to access hard disk controller.
Checking NVRAM.....	NVRAM is being checked to see if it is valid.
Update OK!	NVRAM was invalid and has been updated.
Updated Failed	NVRAM was invalid but was unable to be updated.
Keyboard Is Locked	The system keyboard lock is engaged. The system must be unlocked to continue to boot.
Keyboard Error	Error in the keyboard connection. Make sure keyboard is connected properly.
KB/Interface Error	Keyboard interface test failed.

continued

**Table 44. BIOS Error Messages** (continued)

<b>Error Message</b>	<b>Explanation</b>
Memory Size Decreased	Memory size has decreased since the last boot. If no memory was removed, then memory may be bad.
Memory Size Increased	Memory size has increased since the last boot. If no memory was added, there may be a problem with the system.
Memory Size Changed	Memory size has changed since the last boot. If no memory was added or removed, then memory may be bad.
No Boot Device Available	System did not find a device to boot.
Off Board Parity Error	A parity error occurred on an offboard card. This error is followed by an address.
On Board Parity Error	A parity error occurred in onboard memory. This error is followed by an address.
Parity Error	A parity error occurred in onboard memory at an unknown address.
NVRAM / CMOS / PASSWORD cleared by Jumper	NVRAM, CMOS, and passwords have been cleared. The system should be powered down and the jumper removed.
<CTRL_N> Pressed	CMOS is ignored and NVRAM is cleared. User must enter Setup.

## B Regulatory Compliance

This appendix contains information about safety standards, electromagnetic compatibility (EMC) regulations, and product certification markings for Desktop Board D865PERL.

### Safety Regulations

Desktop Board D865PERL complies with the safety regulations stated in Table 45 when correctly installed in a compatible host system.

**Table 45. Safety Regulations**

Regulation	Title
CSA C22.2 No. 60950/ UL 60950, 3 <sup>rd</sup> Edition, 2000	Bi-National Standard for Safety of Information Technology Equipment including Electrical Business Equipment. (USA and Canada)
EN 60950, 2 <sup>nd</sup> Edition, 1992 (with Amendments 1, 2, 3, and 4)	The Standard for Safety of Information Technology Equipment including Electrical Business Equipment. (European Union)
IEC 60950, 2 <sup>nd</sup> edition, 1991 (with Amendments 1, 2, 3, and 4)	The Standard for Safety of Information Technology Equipment including Electrical Business Equipment. (International)
EMKO-TSE (74-SEC) 207/94	Summary of Nordic deviations to EN 60950. (Norway, Sweden, Denmark, and Finland)

### EMC Regulations

Desktop Board D865PERL complies with the EMC regulations stated in Table 46 when correctly installed in a compatible host system.

**Table 46. EMC Regulations**

Regulation	Title
FCC Class B	Title 47 of the Code of Federal Regulations, Parts 2 and 15, Subpart B, Radiofrequency Devices. (USA)
ICES-003 (Class B)	Interference-Causing Equipment Standard, Digital Apparatus. (Canada)
EN55022: 1998 (Class B)	Limits and methods of measurement of Radio Interference Characteristics of Information Technology Equipment. (European Union)
EN55024: 1998	Information Technology Equipment – Immunity Characteristics Limits and methods of measurement. (European Union)
AS/NZS 3548 (Class B)	Australian Communications Authority, Standard for Electromagnetic Compatibility. (Australia and New Zealand)
CISPR 22, 3 <sup>rd</sup> Edition, (Class B)	Limits and methods of measurement of Radio Disturbance Characteristics of Information Technology Equipment. (International)
CISPR 24: 1997	Information Technology Equipment – Immunity Characteristics – Limits and Methods of Measurement. (International)

## Product Certification Markings

Desktop Board D865PERL has the following product certification markings:

- UL joint US/Canada Recognized Component mark: consists of small c followed by a stylized backward UR and followed by a small US. Includes adjacent UL file number for Intel desktop boards: E210882 (component side).
- FCC Declaration of Conformity logo mark for Class B equipment; includes Intel name and model designation (solder side).
- CE mark: declaring compliance to European Union (EU) EMC directive (89/336/EEC) and Low Voltage directive (73/23/EEC) (component side).
- Australian Communications Authority (ACA) C-Tick mark: consists of a stylized C overlaid with a check (tick) mark (component side), followed by Intel supplier code number, N-232.
- Printed wiring board manufacturer's recognition mark: consists of a unique UL recognized manufacturer's logo, along with a flammability rating (94V-0) (solder side).
- Battery "+ Side Up" marking: located on the component side of the board in close proximity to the battery holder.
- Korean MIC logo mark: denotes Korean EMC certification (component side). Additional certification information is provided below:
  1. Product Name (model)
  2. Certificate ID
  3. Applicant: Intel Korea Ltd.
  4. Date of manufacture as separate marking on product
  5. Manufacturer (country of origin)

Korean MIC logo mark for Desktop Board D865PERL

- Korean Class B statement translated as follows: this is household equipment that is certified to comply with EMC requirements. You may use this equipment in residential environments and other non-residential environments.
